

BEST  
VALUE OPTION

# beautifully warm floors

in slab, off-peak & remarkably efficient heating option

Benefit From Off-Peak Tariffs

One System for all Coverings

No Maintenance

Perfect for Polished Concrete

Local Compliance Testing

enjoy superior comfort and astonishing savings  
from the best radiant floor heating system available

Fully Automated   ●   100% Coverage   ●   Guaranteed Quality

## In-slab Floor Heating Systems

Livella in-slab heating cables are embedded in the concrete slab between 35mm and 75mm below the floor surface, under any floor covering. In slab heating systems are storage heaters and can be used for a variety of purposes from providing background domestic heat to snow melting applications in driveways and roads.

Livella in-slab heating systems are a fantastic and economical choice when heating larger areas, where heat is required for long uninterrupted periods or where homeowners have access to economical off-peak electrical tariffs. The heat stored in the concrete slab is then dissipated throughout the day providing the occupants with warmth.

An in-slab heating system is typically broken into larger zones grouping rooms that are occupied at similar times and programmed to come on and go off automatically.

Unlike hydronic in-slab heating systems, an electric heating system requires no maintenance and is truly a lifelong and permanent feature of a building.

## Installation

In-slab heating cables are typically installed in new homes and are also commonly installed in polished concrete applications. The heating cable is fixed with cable ties at regular intervals to reinforcing mesh at approximately 180W/m<sup>2</sup> prior to the pouring of concrete.
